

Type KVH-GT

Quick-Closing Turbine-Valve for Gaseous Media Electro-Pneumatic Operated

Edition: 03.15

In order to allow more flexibility with process conditions, wider range of operating temperature and pressure and still with concern of efficiency and cost reduction, KÜHME has developed a new technology of quick closing system for gas turbines.

APPLICATION AREA

- Gas Turbines for the petroleum, chemical and gas petrochemical industry acc. to API 616
- Pipe systems for liquids and gaseous media for all industrial sectors

ADVANTAGE:

- Closing time < 0.1 sec
- High safety level through zero leakage
- Heavy duty design for high operating cycles
- Design made for long service life
- Reliable Turbine protection by „safe-set“ design
- Exchangeable valve seat
