

KÜHME Solutions for Gas Engine Application

High Performance Safety Shut-Off and Control Valve Technology

Edition: 06.17
Subject to change without notice

KÜHME as a technology leader within the field of safety shut-off valve equipment has specialized in design, development & production of special valves for most challenging applications. The valve portfolio is characterized by its perfect applicability in the field of Gas Engines due to the fact that the entire spectrum of gaseous media is covered.

KÜHME Valves – The Interface between Fuel and Safety

Advanced type approved KÜHME Shut-Off Valve Technology is building the backbone to guarantee highest safety level in ESD application - for outmost safe and reliable protection of the downstream equipment as well as processes.

ADVANTAGES

- > Highest safety level through zero leakage
- > Quick closing time < 1 sec
- > Optimized design for long service life
- > Design variants for every gaseous media
- > Broad temperature and pressure range
- > Wide range of attractive individualisation options
- > Type approved and certified technology
